PLEASURE FOR LUXURY

Pleasure for Luxury

MIOTTO SRL operating in the market for over 50 years in the sector of luxury items, is renowned for food containers, tableware and other luxury products.

Our production is carried out following craftwork traditions but our structure and staff organization has developed into using the most modern methods, to guarantee the production of a wide range of articles while still maintaining the excellent quality for which our company is famous. Our objects are made of brass sheet, printed or turned and finally manually and not automatically polished to obtain the mirror effect before silvering or gilding.

In galvanic, our objects are immersed in a nickel bath and then in a high thickness pure silver bath or in a pure 24K gold bath.

Our peculiar mirror finishing is due to the great mastery of our craftsmen. Anti-oxidant treatments are not used in our objects in order not to compromise the brightness of the silver. Over the years, our careful workmanship has led us to develop customized items, large in size and on design, serving the most prestigious shops, famous hotels, well-known catering and important royal families, decorating their homes with the style that has always distinguished us.

To Buy an ORIGINAL Miotto product, guarantees Italian design, first quality of Italian materials and the skillful refinement of our master artisans. The quality of our collections is guaranteed by the hallmark.

FINISCHES

SILVERING -MIRROR POLISHED FINISHING

Silvering is the deposition of a silver layer on metal surfaces usually obtained with an electrochemical process in a cell in which the cathode is the object to be silvered and the anode is pure silver. The discovery of this technique, called galvanic plating, began in 1791 when Luigi Galvani discovered the electric fluid, which is why all the processes that involve an electrolysis to cover a surface can be called galvanic process, which derives from his surname "Galvani". The first device for electroplating (or galvanic plating) was developed in 1800.

GILDING MIRROR POLISHED FINISHING

The gilding method we use is electrolytic. The object to be gilded acts as a cathode in a gold cyanide bath; this gilding can be performed directly on copper, brass or bronze objects, while the other metals must be previously subjected to copper plating. Furthermore, the gold plating applied with the electrolytic method and with thicknesses from 1 to 5 microns, can be used on pieces of electromechanical devices (generally connectors). Since gold tends to diffuse into copper alloys over time, a layer of bright nickel with a thickness of at least 10-20 microns must be applied before flowing.

COPPER PLATING

The passion of manual skills meets the most advanced technology for perfect copper plating, thanks to our galvanic baths that reflect the same techniques used for both silvering and gilding. All of this to make possible customized finishes that look at customers' requests, since with its pink or reddish colour, it makes the environments unique and original.

SHINY BRONZE

Thanks to the research and development of Miotto laboratories and always looking to the future, we wanted to create a new galvanic finish, the SHINY BRONZE. A shiny effect to give dynamism to the shapes in a sophisticated and refined way, a unique and absolutely fashionable touch. Always attentive to the aesthetic and functional demands of our customers, we have thought of this new finish, guaranteeing the products against the action of atmospheric agents and from contact with substances such as lemon, vinegar, etc.

LACQUERING

Lacquering is an ancient craft known from 7,000 BC. Made with trees' resins up to the finest techniques of now-a-days. We have chosen to use only water-based colours because they are less toxic and more environment friendly. The possibility of colouring and personalisation we can offer are almost infinite and the finish can be shiny or opaque lacquer. It is possible to cover the RAL colorimetric scale, making any colour shade. Customizing also means decorating. The decoration system we offer you, called DIP PRINT, uses special inks applied on a water-soluble film, arranged to form a decorative motif. Miotto offers high quality lacquered products, where the thickness of the lacquering is adequate to guarantee the integrity of the brilliance over the years

DECORATIONS

Taking care of each customer, adapting objects to each individual's specific needs and reflecting their tastes because we are not all the same. It is this attention to detail, the customization of the items and our fine craftsmanship that leads us to be suppliers of the most influential royal families, luxury hotels and prestigious shops.

Delight yourself with what you like:

CHISELING

Chiseling is an ancient art that was already practiced by Egyptians, Cretans, Greeks and Romans that by means of cold plastic deformation, executed with chisel can be obtained real works of art finished in detail.

This art, even for small objects, is tiring; often especially in the beginning, it is easy to have cramps in your fingers. The

hammer and chisel must be kept firmly in the hands; the chisel must not swing or adhere to the plate but must be about half a millimeter apart. In addition, as for the engraving so a good chiseler must be first a good draughtsman.

The technical difference between engraving and chisel is that for the first metal is removed and in the chisel, metal is moved. The chisel is irreplaceable in goldsmithing; the most diverse objects are obtained with this processing in the past as today.

BORDERS

It is in this area that the silversmiths of all time have expressed all their art and skill enriching the objects with borders that served as a contour to enhance the exclusivity of the objects. The most popular borders are the English border, the Empire border and the Queen Anne border but we are able to make custom borders of various thicknesses and widths.

Moreover, through the lost wax techniques, we are able to achieve cast borders, such as the shell border and the filigree border.

The lost wax technique has remained, since ancient times, almost unchanged and we believe that the works in fusion are probably the art forms that last longer.

HAMMERING

The hammering on metals is performed completely by hand with the use of various hammers, and consists in deforming the plate until obtaining the desired shape to give the object a particular and elegant finish.

STONES, STRASS, JEWELS, ORNAMENTS

Always in love with beautiful things, we create tableware accessories full of charm and style. Everything is taken care of in detail and the festive elegance of the stones and strass give a touch of light to the objects to amaze your guests. Our jewels, finely decorated with natural stones, crystals or Swarovski crystals are handmade with a rigorously assembled by hand, stone setting

controlled by a magnifying glass, personalized galvanic in gold, silver, palladium, rose gold, rhodium, antique gold, ruthenium (gunmetal) to guarantee the uniqueness of our creations, strictly MADE IN ITALY.

ENGRAVINGS, HALLMARKS AND EMBOSSED APPLICATIONS OF LOGOS TRADEMARKS AND CRESTS

To provide the possibility to our customers to stand out by making exclusive items by engraving a logo, a name, a brand or a coat of arms by means of specific pantographs with diamond tip or, alternatively, with laser engraving.

Or by punching carried out with punches and relative counter-molds, so that you can imprint in the piece, by means of special punching machines, the subject requested by the customer.

Or even through applications in relief, such as coats of arms, to recall to mind, with immediacy and precision, a person, a family, a social group or a territory with a single condition, do not copy the coats of arms of others!

With us You can give life to your style!

Since 1972 our company has always distinguished itself from other companies thanks to the quality of the materials and the innovation of its products. In recent years, our exclusive food containers have had great success, producing 7 different sizes of round shape and 4 of oval size, becoming leader of food containers of large dimensions. The models can be with internal ceramic or with thermal coating to keep the food at the right temperature.

HOW TO CHOOSE THE RIGHT MODEL OF FOOD CONTAINERS

Before buying a food container, it is essential to decide which model is best suited to our needs. The choice of buying a small or large food container will depend on how much food you want to store inside. The round and oval models with internal ceramic or porcelain are really easy to use because it will be enough to heat the food inside the ceramic in the oven or microwave and when hot, the insert will be placed inside the food container.

Choosing one of these models will also mean practicality in cleaning them because once they have been used the removable ceramic or porcelain can also be washed in the dishwasher. A very convenient accessory for the food containers with metal bottom is the chafing dish with candle or gel that permit to keep warm the food. The most used model of chafing dish is composed of a ring structure to which the support for the cover can be hooked, which in turn can be straight or arched.

For the chafing dish that uses the candle make sure you do not are not exposed to drafts. For the model with gel, be sure to put the water between the bottom and the ceramic of the food container. The thermal food containers have fixed inners and are very useful for keeping food warm for long hours. These models have a non-stick internal surface where the food will not stick and will not damage. It is very important not to cut the food inside the container so as not to damage the inner lining.

These containers cannot be immersed in water. To clean the inner after use, use a damp sponge and neutral detergent.

All our food containers do not have an airtight seal because they are designed to serve food, not to be transported

HOW TO USE THE FOOD CONTAINERS

There are many types and models of food containers suitable for everyone's needs. To make the most of them it is important not to overfill them, as they may not maintain the heat of hot food. Our advice is to stick to the capacity it can hold and which we indicate in liters on each model.

The second tip is to choose the food container model based on the space on the table and the occasion.

The third advice is to always clean the food container carefully with water and neutral soap and dry very well in order to avoid deterioration of the silver or gold surfaces.

WHY CHOOSE A MIOTTO PRODUCT, MADE IN ITALY:

An important criterion that will prompt you to choose one of our products is the quality of the raw materials used strictly made in Italy, which are certainly placed in the high-end range. Quality means that they must be functional and must last over time. Another element not to be forgotten is the care, design and refinement with which we produce our articles. Regardless of the model, you decide to buy, know that our food containers are high quality furnishing items full of charm and style. Everything is taken care of in detail by our master craftsmen who for almost 50 years with love have created styles that are always suitable for every occasion. Another advantage in choosing our products is the customization we offer such as edges, chisels, logos, natural stones, Swarovski, Murano glass and much more.

 Round food container
 with porcelain.
 Chisels on the cover and bottom

The bain-marie food containers are particularly useful for heating reheating food during a wedding, buffet or party.

These models are not suitable for moving around, because it is necessary to insert the water between the bottom and the porcelain, which after being heated transmits its heat to the food. They are made with a stainless steel bottom and a sturdy structure which is then galvanized. According to your taste they can be in different finishes and customizations.

The lady of the table

In a refined and very elegant setting, a kitchen service cannot be considered complete if there is no tureen. With a rounded and rounded shape, it is a must have in the kitchen, both for bringing traditional dishes to the table for our loved ones, and for more formal evenings, for guests of a certain respect who need more attention. Certainly many have a family tureen, because it is a symbol of elegance to display and bring to the table, but if you don't have it yet, now is the time to give yourself a gift, to be handed down, as a symbol of social distinction.

Thermic food container

*The thermic food containers are equipped with a thermal insulation coating that keeps the food temperature constant for a long time.
It is particularly recommended in those situations where you want your loved ones and guests to find hot or cold food.
Just open the cover and enjoy the dish as if it had just been made.*
